

Guide to Install Lifetech Object Content Management System..

Get the lifetech ocms software winrar version

lifetech_ocms_10_08_2021

8/10/2021 4:48 AM

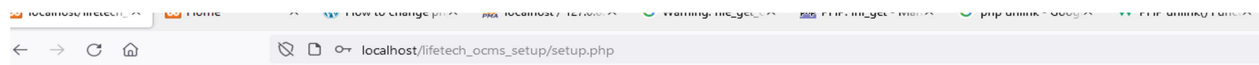

WinRAR archive

Extract it and rename the package to what you want it to bear

After extraction copy it to the XAMPP htdocs folder or WAMP www folder, then launch the package and follow the steps to complete your installation.

Step1: Database Configuration

In this step we are to create a database and add privilege to it in the database, then we provide the information here to verify and confirm the authentication to that database before proceeding.

Step1: Database Configuration

You are to firstly create your database and add your database privilege to it, then supply the information here for verification

Username:

Host Name:

Password:

Database Name :

If the information supplied not correct then system display

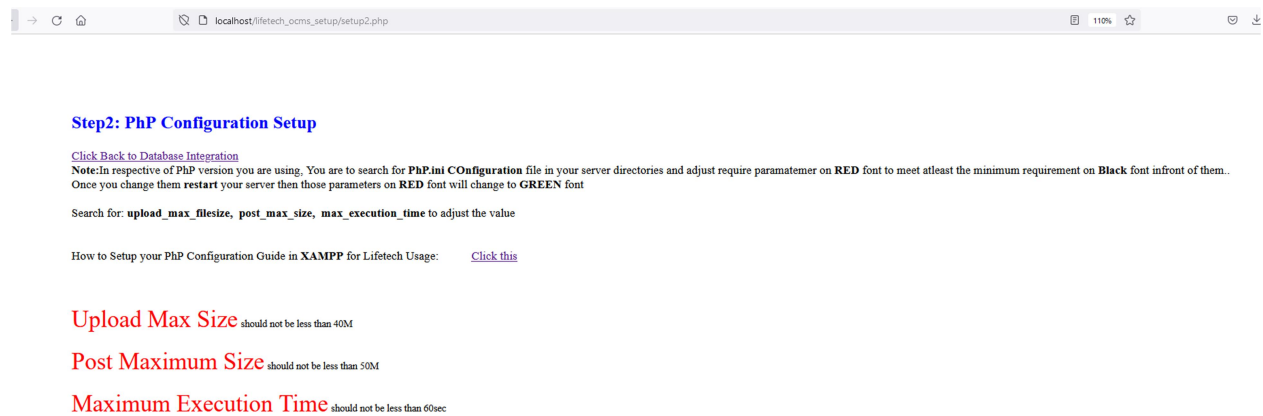

The Database Information Supplied is not Correct, Reverify!!!

Step1: Database Configuration

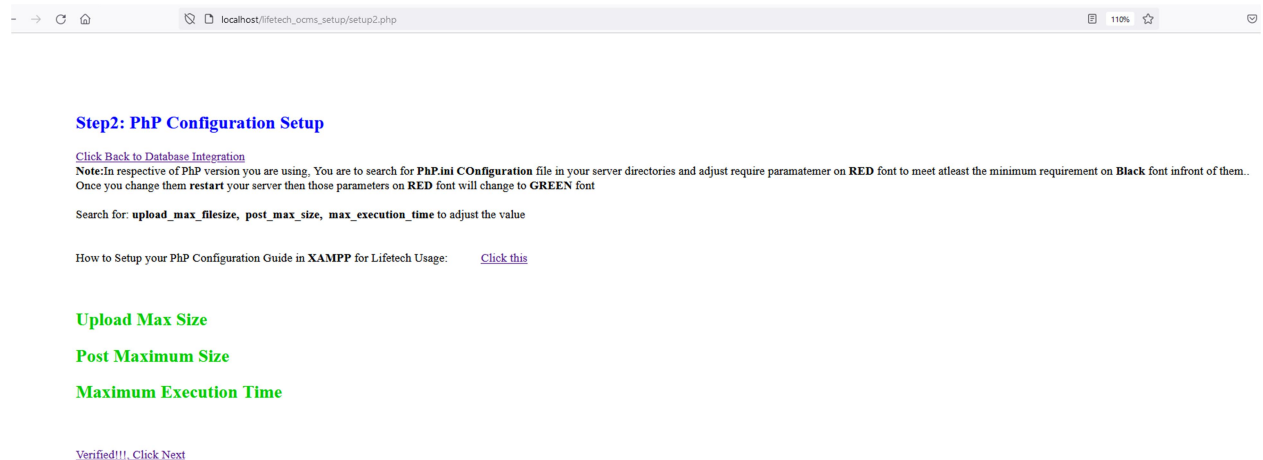

If the information is correct then it will now display successful then continue to step2

Step2: PhP Configuration Setup

In this step we are to upgrade our PhP functions or class to meet the lifetech ocms requirement for easy usage. There is a guide to access the php.ini file in your package named **How to change Configuration settings in PhP for lifetech usage.pdf**

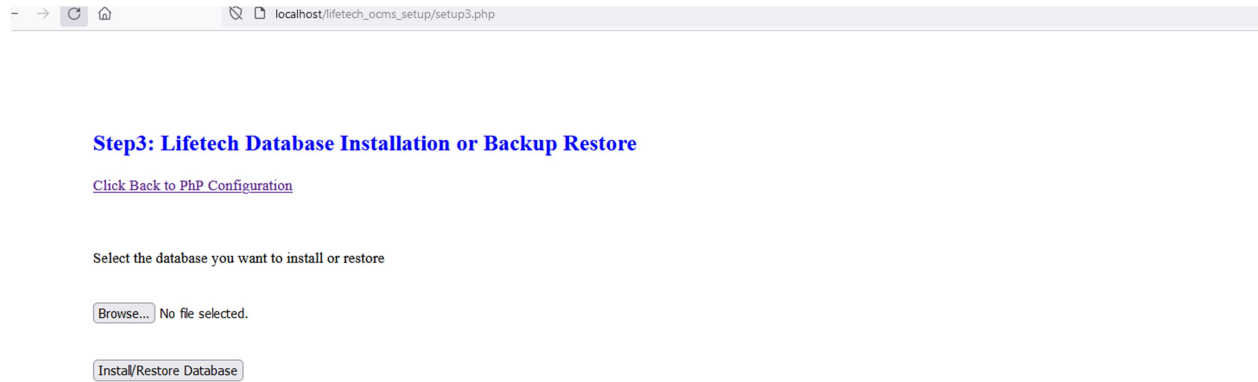

If the PhP configuration perfectly done, all the parameters will be on GREEN font as displayed below and a verified link to continue to step3 display.

Step3: Lifetech Database Installation or Backup Restore

In this step we will be able to lift the database file for final installation and also at this stage if you already have your website in another system and you want to continue your website from another system or webhosting then you can also restore the backup database here.

The database file is named lifetech_installation_db in your package name

Note: If it display error about table already exists, it means there is or are tables in your database, go and drop all tables in the database and re-install it.

If the operation is successful then it displays this

Great!!! The software successfully installed
